Back and neck care for residents of Gainesville, the Southeast and beyond took a significant step forward today with the launch of the UF Health Comprehensive Spine Center.
Using a multidisciplinary approach, the center unites spine, neck and back pain experts from several UF College of Medicine departments under one roof, including neurosurgeons, orthopaedic surgeons, physical medicine and rehabilitation physicians, pain physicians and neurologists.

Kevin Vincent, MD, PhD [5], an associate professor in the UF Department of Orthopaedics and Rehabilitation [6], said this often leads to a delayed diagnosis. The center, he said, represents a much-needed move toward more comprehensive back and neck care.

“Our multidisciplinary approach will allow us to address the reasons behind back pain more quickly,” said Vincent, the medical operations director of the UF Health Orthopaedics and Sports Medicine Institute. “This will lead to less use of medications that frequently aren't beneficial, particularly narcotics and muscle relaxants. Additionally, it will lead to more appropriate use of advanced imaging and testing."
